DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Hill et al. Hill shows the structure of the claimed invention, for example, in Fig. 1, with a plurality of gate electrodes (16) arranged parallel with each other, n-channel and a p-channel regions which are arranged adjacent to each other in a lengthwise direction of said gate electrodes (i.e. in the direction between the source and drain regions), a wire (22) connecting the n-channel and p-channel regions, where the wire has a width greater than the distance between the adjacent gates, and where a portion of wire (22) is disposed above a portion of the gates (i.e. the wire overlaps the edges of the gates) with an insulating film interposed therebetween.

The insulating film is also formed on the top and side face of the gate electrode, and would constitute an interlayer film different from gate insulation film (15). Also, as seen, for example, in Fig. 5C, the wire (drain electrode) may also be connected to the gate electrode of adjacent transistors.

Allowable Subject Matter

Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
